

Active Roles

A clean, secure, path forward for your Microsoft environment

Overview

The rapid growth of identities and identity accounts due to enterprise growth, mergers and acquisitions activity, and other business structure changes have expanded your attack surface, leaving you vulnerable to cyberattack. Are you able to address this growing security gap and comply with regulations?

Your resources are taxed by manual identity policy administration across multiple AD domains, each with its own console. The chaos and complexity are difficult to manage and result in too many unmanaged privileged accounts, too much manual scripting and constant unsuccessful compliance reviews. You need more than native Microsoft tools to address this last-mile execution gap.

Active Roles is uniquely positioned to provide simple identity governance for Microsoft environments — consolidating, streamlining and strengthening your Microsoft identity accounts to protect your business.

What Active Roles delivers

Automated enforcement

Automate policy enforcement across disparate systems from a single console to reduce errors, streamline identity account administration and reduce the chaos in your Microsoft environment.

Benefits

- Protects critical Active Directory, Entra ID and M365 data
- Regulates administrative access via a least-privilege model
- Overcomes native-tools limitations
- Delegates fine-grained privileges to those who need them
- Provides extensive group management
- Automates users and group account creation and deletion
- Provides a single, intuitive tool for hybrid identity security and management
- Generates audit-ready history and activity tracking to log when changes are made and by whom
- Deploys quickly for rapid time-to-value

Streamlined administration

Organize and simplify your environment. Eliminate standing privileges that shouldn't exist and gain visibility and control of your entire Microsoft identity environment on a single system and console.

The governance conduit

Accelerate your path to identity governance and administration (IGA). Enforce administrative and governance policies inside your Microsoft directories. Prepare your Microsoft environment for a clean, organized and safe complement for your IGA solution.

Key features

Hybrid AD-ready

Active Roles consolidates visibility across on-premises AD, Entra ID and M365 in a hybrid deployment. Unify workflows and provision consistently across all domains and tenants via a single console.

Automate account administration

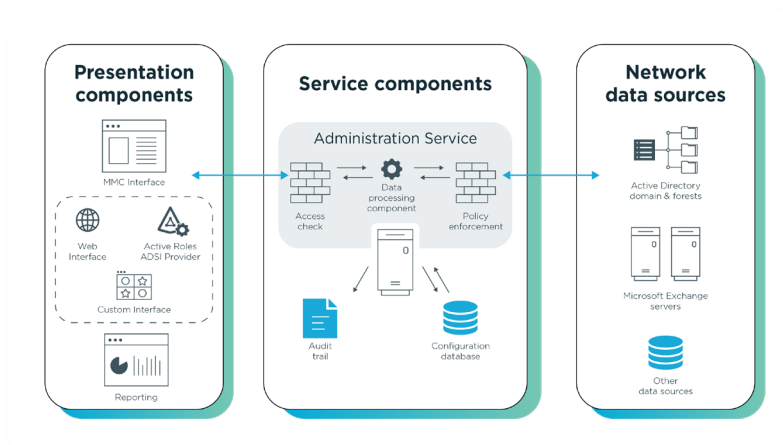

Active Roles automates the creation of user and group accounts across AD, Entra ID and M365, creating Exchange mailboxes, populating groups, and assigning Windows resources. It also automates reassigning and removing access rights across all relevant systems.

Consolidate management through integration

Active Roles ensures integration with many One Identity products, including Identity Manager, Safeguard, Authentication Services, Password Manager and Change Auditor. Active Roles also automates and extends the capabilities of PowerShell, ADSI, SPML and customizable web interfaces.

Active Roles integrations:

- Exchange
- OneDrive
- SharePoint
- AD LDS
- Microsoft 365
- Entra ID
- Microsoft SQL Server
- Oracle Database
- Oracle Unified Directory

Secure access by attribute

Active Roles uses a role-based access control (RBAC) model to delegate granular privileges and ensure identities and objects have only the access they should, as well as to deprovision privileges to reduce standing privilege and organizational risk.

Day-to-day directory management

Manage Exchange recipients, Dynamic/Distribution Groups, computers, virtual user attributes and all AD/Entra ID/M365 directory objects from a single MMC or web interface console.

About One Identity

One Identity delivers trusted identity security for enterprises worldwide to protect every identity, human and non-human. With flexible deployment options and subscription terms, from self-managed to fully managed, our solutions plug directly into an organization's identity fabric to strengthen the identity perimeter, reduce breach risk and keep governance and compliance aligned at scale. Headquartered in Cork, Ireland, and trusted by 80 of the Fortune 100, One Identity is a leading provider of integrated identity governance and administration (IGA) and privileged access management (PAM) for identity security without compromise.
